Computer Technology

MPS strives to be on the cutting edge of computer education. We are committed to providing programs that reflect the changing needs of society and the rapid changes in technology. Our expert staff is working constantly to ensure that our computer courses give students the skills necessary to succeed in business, industry, college or university.

The school is equipped with two networked computer labs. Students are exposed to the most up-to-date word processing, spreadsheet, power point and graphics software, as well as offered carefully monitored Internet access.

In order to provide students with the tools that they require, our courses offer an integrated approach, combining theory with practical applications. Emphasis is placed on hands-on problem solving; students learn by doing.

A strong emphasis is also placed on computers across the curriculum. Staff advisors from all subject areas work with computer and technology teachers to design broad based projects. Similarly, computers are used as a learning tool throughout the curriculum at MPS.
